RE: Docket Number 99P-1340/CP 1 - Eternity Petition

Dear Sir/Madam:

I am submitting herein a video tape (5 minutes duration), produced by Anderson Labs (West Hartford, Vermont), which illustrates, in part, some of the affects experienced from the inhalation of fragrance chemicals.

I have written earlier in support of this petition, however, I thought it would be helpful to provide this additional evidence showing the otherwise hidden dangers that would be amplified in stronger perfume formulations.

It has seemed apparent to me for some time that fragrances would be more appropriately categorized as "controlled substances," rather than as "cosmetics," as there is no doubt that these chemicals alter normal body function through multiple body systems.

Fragrance formulations are not "personal" products. They are, and have the affect of, chemical weapons. Please do fulfill your responsibility in getting the appropriate health hazard warning labels on these products.

Thank you for your time, attention, and most careful consideration.

Sincerely,

Marie Annette, RHIT
63611 High Standard Dr.
Bend, OR 97701
